

We are currently looking for:

## R&D Electronic Engineer (Product-Focused)

Research & Development

Melaka, Malaysia

Full-time, On-site

### Your Tasks:

- Qualifying new components and second source components
- Carrying out the necessary type tests (e.g. EMC, temperature, ambient light) and release measurements
- Support product verification testing, document, and communicate test results.
- Collaboration in the transfer of products to series production
- Analyze test results from production, identify issues and recommend solutions to ensure optimal product performance.
- Second Level support for production issues
- Resolve local production issues and provide feedback to the organization. Support series products throughout the entire product life cycle.
- Work in international engineering teams with coworkers from Asia and Europe

### Your Qualifications:

- Bachelor's Degree in electronics engineering, telecommunication engineering or comparable education. Master's degree is a plus.
- Very good theoretical and practical knowledge of analogue and digital circuit technology and in the field of EMC, ideally in the field of optical sensor technology
- Very good knowledge of electronic components
- Creativity and high-cost awareness
- Interest in new, technically complex issues
- Ability to present in front of stakeholders and managers.
- High degree of independence and a systematic way of working
- Willingness to take on responsibility and implement ideas with great commitment.
- Required languages: English. German is a plus.

### Benefits

- Flat Structures
- Individual development opportunities
- Great company cultures and values
- Local and overseas learning opportunity
